SANIYA MEHTA

saniyameh30@gmail.com | +91 9503740645 | Pune, India | saniya-mehta.vercel.app | github.com/saniya3006

PROFESSIONAL SUMMARY

Computer Engineering undergraduate with a 9.19/10 SGPA and hands-on experience in AI data pipelines through an internship at Tech Mahindra. Skilled in Python, C++, SQL, Data Structures & Algorithms, OOP, DBMS, Flask, REST APIs, and machine learning. Experienced in synthetic data generation, data preprocessing, evaluation pipelines, and full-stack application development. Strong foundation in software engineering and applied AI, with projects spanning machine learning, web development, and AI-driven systems.

INTERNSHIP EXPERIENCE

AI Intern 01/2026 – 03/2026
Tech Mahindra

- Built and validated synthetic data generation workflows supporting multilingual AI model training and expanding evaluation-data coverage.
- Designed and structured AI evaluation datasets, applying data quality checks to identify inconsistencies before model-team handoff.
- Configured and validated end-to-end evaluation pipelines for AI training datasets, improving consistency and reliability of evaluation data.
- Collaborated with the project team to prepare, validate, and organize datasets for multilingual AI model evaluation.

EDUCATION

B.E. in Computer Engineering 2023 – 2027
Bharati Vidyapeeth's College of Engineering for Women Pune
SGPA: 9.19 (Third Year, 6th Semester)

XII (CBSE, Science) 2020 – 2023
Rotary English Medium School Khed
XII (CBSE, Science): 70.20% | X (CBSE): 89.66%

TECHNICAL SKILLS

Languages
Python, C++, SQL, JavaScript

Core CS
Data Structures & Algorithms, OOP, DBMS

AI / Data
Scikit-learn, Pandas, Data Preprocessing, Model Evaluation, Synthetic Data Generation

Tools & Blockchain
Git, GitHub, VS Code, Jupyter Notebook, Excel, Streamlit, Solidity

PROJECTS

TrendCart — E-Commerce Trend & Inventory System
Python, Flask, REST API, JavaScript, HTML/CSS

- Developed a full-stack inventory management system using Flask, REST APIs, and CSV-based data persistence.
- Implemented product and order management, inventory tracking, search/filtering, and dashboard analytics.

ReliefChain — Blockchain-Based Disaster Relief Fund Tracker
Solidity, Ethereum, Hardhat, Python, FastAPI, React, Web3.py

- Built a blockchain-based application to track disaster-relief campaigns, donations, and fund allocations through transparent records.
- Developed Solidity smart contracts with access control, transaction verification, campaign management, and fund-allocation validation.

Diabetes Prediction System
Python, scikit-learn, pandas, Streamlit

- Developed machine learning models using Logistic Regression, Random Forest, and KNN to predict diabetes risk.
- Implemented data preprocessing, imputation, feature scaling, 5-fold cross-validation, and model evaluation; deployed using Streamlit.

AI-Driven AR/VR Therapy for Trauma and Phobias
Final Year Project — In Progress

- Designing an AI-driven AR/VR application with customizable immersive exposure scenarios and adaptive user interactions.
- Developing system architecture and exploring AI-based personalization for real-time environment adaptation.

CERTIFICATIONS

- Oracle Cloud Infrastructure 2025 Certified Generative AI Professional & Foundations Associate
- AWS Academy Graduate — Generative AI Foundations
